Q: Why should I prefer (this) to this_ I see these two usages: Why should I prefer (this) to this_? Why should I prefer (this) to this_? What is the difference between those 2 sentences? What are the nuances between those 2 usages? A: One might be a hypercorrection to the other. We might use "this_" as an object for emphasis and so emphasize "this" itself. On the other hand, "this" is already emphasized by the use of an asterisk (*). This is the *nearest* road; that's the *last* road. This is the *nearest* tree; that's the *last* tree. So in this context, "this_" would simply be a form of emphasis. Why should I prefer (this) to this_? It's a bit confusing because the sentence doesn't make sense. This_ clearly makes little sense because it doesn't make sense. Why? We could speculate, but we'd be using an explanation for a lack of clarity. It is the *nearest* road. It is the *nearest* tree. Q: Add time to date in java How can i add seconds to date in java for example i have 01-01-2010 how can i add 858 seconds to this date A:
