In particular, phase change memory materials, such as chalcogenide alloys, have proven to be particularly suitable for use in non-volatile memory arrays. A memory cell of a typical conventional phase change memory device may include a top electrode, a phase change memory material, such as a chalcogenide alloy, a bottom electrode, and a bottom electrode dielectric material separating the memory material from the bottom electrode. Thus, the phase change memory cell may include two conductive electrodes separated by a barrier (e.g., the chalcogenide alloy), in which one of the electrodes is electrically connected to an active device, and the other electrode is electrically connected to a passive device, or a contact, such that the barrier material is electrically connected to a conductive material that connects the phase change memory cell to other active or passive devices of the memory device. For example, a bottom electrode may be connected to conductive pillar structures, such as, for example, conductive sidewall spacers of a transistor (which may serve as the active device of a memory cell), and/or

A: You can try using map: date_list = ['10/10/2001','01/05/2006','11/13/2002','05/02/2007','15/10/2004'] [int(i[1]) for i in map(str.strip, date_list)] Out[431]: [5, 0, 3, 1, 4] Little Darlings Little Darlings may refer to: Little Darlings (drama), a 2016 American play by Tony McNamara Little Darlings (play), a 1929 play by Clifford Odets Little Darlings (1931 film), a film based on the play Little Darlings (1953 film), a film based on the play Little Darlings (3e33713323
