Virtual Identity Crack+ Incl Product Key Free Download

The add-on allows you to quickly change the sender-address of an email. You can enter the sender-address as plaintext or configure it via a HTML-Mail. The sender-address is applied automatically to the reply-address, forwarding and similar functionality. The feature is used by many people to provide a permanent email-address for a temporary adresse. With this add-on you can also change the sender-address in a smart way. This way you get a professional reply-address for temporary mailboxes without the need to create an account. Requirements: The add-on needs the Thunderbird add-on Mozilla Thunderbird HTML Improvements to function properly. Description of Mozilla Thunderbird HTML Improvements: Mozilla Thunderbird HTML Improvements is an add-on for Thunderbird that allows you to easily change the sender-address on an email. You can enter the sender-address as plaintext or configure it via a HTML-Mail. The sender-address is applied automatically to the reply-address, forwarding and similar functionality. The feature is used by many people to provide a permanent email-address for a temporary adresse. For documentation please refer to the official website of the add-on: Installation: Please use the repository to get the latest version. Alternatively you can also get the latest version directly from the author: Please note: Please be aware that this is an add-on that could potentially cause inconsistencies in your system. If you encounter problems please uninstall the add-on and re-install it again to create a backup of your current configuration. For information you can also open an issue to report a problem. If you think that the add-on is a useful extension and you want to support me, you can donate using the button below. Donate: (It's the most secure and quick way to donate) If you have found any bugs or have a request for improvements please open an issue:

Virtual Identity Free

KeyMacro allows the creation of a new sender-address from a formatted string. As long as there is a default e-mail-address in the string, KeyMacro will set that sender-address in the email address box (in Thunderbird it is called the envelope), that is used in the default reply of the Smart Reply feature. Using KeyMacro makes the setup of a new sender-address much easier. Features: Quick and easy create of a new sender-address You can change the sender-address later on in the account properties If the sender-address already exists, it will be changed to the new one Possible keymacro are for example "[Log-In]" or "[Tell-A-Friend]". Use case: You receive an email that contains your user@example.com account. The sender-address is [Log-In]. In order to reply to that message you need to set your user@example.com account as the sender-address. Your setup could look like this: Select your account in the accounts drop-down menu Click the envelope and press the "Create Identities"-button Enter your desired sender-address in the new dialog Type the email-address, that should be your new sender-address Confirm your action in the dialog and hit OK Smart Reply: Using the Smart Reply feature you can create identities based on a part of the content of the email (using KeyMacro). The sender-address that is created for you in the process is the one you specified in the KeyMacro dialog. This can be useful if you have a mail server and you already have the address of that server in the text of the email. All you have to do now is to enter your identity in the reply-box. Select the account you want to use for the identity Select the e-mail in which the identity should be created (the sender-address in your case) Select [Instant Identity] In the dialog that opens, enter your identity. Hit OK But this is only the beginning, KeyMacro has a lot more features: Settings: If you don't want the identity to be an instant identity, you can change this in the Options/Preferences-section. Create Identities: If you have more identities that you want to create automatically, you can define them in the same dialog. Password 77a5ca646e

Virtual Identity Crack

======================================= Edit Sender for Thunderbird ======================================= A fairly simple Thunderbird add-on that allows you to quickly edit the sender of an email. With this addon you can create and edit Identities that are not yet in the Thunderbird account, and you can use it to quickly reply to email messages. Version 0.6.1 (release 0.7) ============================ Some changes in the add-on: - no need to use/run the old add-on, the new one works with thunderbird 51.x, too - added a method to get a text representation of the identity and the email address - changed the method to get the email address of the identity to use that one instead of the one of the identity itself - replace the IMAP-extension by the new REST-Interface - updated the version Version 0.5.0 (release 0.6.0) ============================ Some changes in the add-on: - added the possibility to send an email to a newly created Identity - improved the Email-Address of the Identity to the one from the envelope - adding a more exact error description - updated the version Version 0.4.3 ============================ A minor update: - simplified the add-on usage - added a message-box to specify the email-address of the Identity to use - updated the version Version 0.4.2 ============================ Some changes in the add-on: - improved the usage of Identities - added the possibility to specify the email-address for the identity - updated the version Version 0.4.1 ============================ Some changes in the add-on: - fixed a few bugs - updated the version Version 0.4.0 ============================ Some changes in the add-on: - fixed a few bugs - added the possibility to edit the email-address of an Identity - updated the version Version 0.3.1 ============================ Some changes in the add-on: - fixed a bug in the get-method for the email-address - added the possibility to set an email-address for the identity - updated the version Version 0.3.0 ============================ Some changes in the add-on: - added the possibility to set the email-address of an Identity - added a new

What's New In?

Add-on for Thunderbird allowing the user to add a sender as an Identity (i.e. a temporary alias) Main Features: - Add Identity for Sender to Thunderbird - Quick Resolver Add-on integrates the smart resolver into Thunderbird - Quick Resolver Add-on lets you have an Identity with preset answers for popular questions Links to the Docs and Download: Feedback and bugs: What you will need: - Thunderbird 51.2 and up - Plugin for Thunderbird 1.0.9 and up Screenshots: Installing Add-on: Installation Steps: 1. Open the Add-on-Manager (as Super User / Administrator) 2. Select Thunderbird or Thunderbird menu, then open the add-ons manager 3. Search for the 'Quick Resolver' extension. 4. Click the 'install' button. 5. Click 'install' again. 6. 'Quick Resolver' should now be installed. If you don't see the 'Quick Resolver' addon in Thunderbird, then make sure you're running at least Thunderbird version 51. Usage: 1. Open Thunderbird 2. Click the quick resolver menu 3. Click 'Identity' (button in the middle of the menu) 4. You should now see the list of identities you have created. 5. Click the name of the Identity you want to set as Sender. 6. You should see the Sender-Field in the Sent-Mails-list. (btw, this is in a separate list) 7. When you send a mail with your Sender-Field, Thunderbird will replace your Sender-Field by the Identity (Example: "Mr. X, " -> "Mr. X, Mr. X") Tip: In the menu you can choose which identity is the default sender. Updating the extension: If you want to update the add-on (add new features or fix bugs), please do the following: 1. If you already have an identity saved with the extension, do the following
