The setting of the game is the Norse mythology, specifically Thor's world Einherjar Full Crack. You lead a group of einherjar, warriors of immortality, at the battle of Ida. You have been chosen to become the new ruler of Einherjar, and as the leader your decision will shape the history of the future. In the gameplay phase, you will lead your troops to victory against all comers in a world-wide battle, earning experience and expanding your resources. In the Build Phase: In the build phase you can use your resources to create things like land, houses, resource nodes, buildings, weapon upgrades, mana nodes, airships or anything else you need to build your empire. A player can build as many things as he has resources for, so this is a very different kind of resource management than you have seen in other games. As the leader you will have a world map, which shows you what are your resources, your upgrades and your knowledge right now. You can decide where to expand, or not, according to your resources and how much knowledge you have already gained. For example, if you have very few trees and knowledge, you might want to keep your resources for defence and protect a small empire while waiting for more resources and more knowledge. On the other hand, if you have many trees and trees for production, you might want to expand to the nearby islands. In the Combat Phase: During the combat phase, you will engage in RTS-combat, which is 2 teams, the attackers and the defenders against each other. Each team can choose a number of unit types, each consisting of a type of weapon and a type of unit, and they can use those to attack or

defend. Each unit has a 3 level attack-defense-rating, and you can manage how much power your units receive and are able to attack a target. However you cannot build combat units, you will need to recruit them in the build phase. Your enemy will attack you, and you will defend yourself, but with enough experience and knowledge you will be able to make your defences stronger than his or hers. The loot-system is very advanced, this means that you can be very fancy in what you fight for, and what you want to receive for each experience. Depending on the attack or defense-rating of the item, it will have a special effect that you can use to your advantage. What you can build in the build phase: In the build phase you can
