ORPALIS PDF Reducer Professional is an application that allows users to reduce the file size of a PDF, to save space and speed up file transfers. An awkward interface that lacks precision and doesn't allow it to target an individual PDF as standard While ORPALIS PDF Reducer Professional is clearly a professional product, both in presentation and function, the design contains some issues that can cause major problems for some users. In particular, ORPALIS PDF Reducer Professional's standard method for targetting individual PDFs is selecting a folder, not a file. Users are able to go into the options and change the way the program targets files, either dragging files into the software or to target individual files, yet it remains an odd standard. The option to change it should be on the main window where the file input is selected, especially since processing an entire folder is very time consuming. The process is even more time consuming if the explore subfolder option is checked, which it is as standard, and could lead to a huge scan being performed A useful array of settings that provide users with ways to change how the application processes PDFs Despite the odd way the application targets files, it does provide users with useful options to control the size reduction process. The image quality can be changed, with preset DPI settings from Very High, to Low, or users can enter DPI number directly. The option to discard useless objects that are unused and just taking up space can also be enabled. Additional removal options such as removing formfields, annotations, bookmarks and embedded files are also readily available. There are no shortage of ways to customize how ORPALIS PDF Reducer Professional operates and the range of options should satisfy most, if not all users. The different settings are expected, since the application is not cheap, yet it can be configured to scan an entire drive in one go
