From Process Explorer I can easily see which processes have some ports open. But is there a way to stop them? I tried kill -KILL , but it's not working. A: If you have not used a service for an application to allow other applications access to a port on your machine, that application will be the only process associated with that port. If the app is running as a service, you need to look into it's service manager (the AppRun element within the application's registry hive) to see what settings are set up so that it runs as a service. Then, once you have figured out how to stop it, you will need to use a tool such as "Wmic" (Windows Management Instrumentation Command Line) to stop the service. A: If you want to detect and close the port in case you don't know who is using it you can use Netstat. netstat -t -n -p TCP -t=What you want to find out -n=all processes that are running in the system -p=only processes that are using the port.
