[AVG.com].Cercidiphyllum Cercidiphyllum is a genus of flowering plant in the Cercidiphyllaceae family, native to Central America and northern South America from Honduras to Panama. It has a single species, Cercidiphyllum jamaicense, the Jamaican osage orange. Formerly classified in the citrus family Rutaceae, this group of trees has a series of prickles which are characteristic of the family. These can be used to distinguish between the two genera. The tree was first described in 1656 by Carl von Linné in his Sertum Florae Novae Hollandiae. In 1768 the genus was moved into the orange family by Carl Linnaeus and the name changed to Perideridia. In 1994 the name was revised to Cercidiphyllum. Description Uses The Jamaican osage orange is used as an ornamental tree, where it has gained the Royal Horticultural Society's Award of Garden Merit. It was also formerly grown for its ornamental foliage, but this has been replaced by other osage oranges from the same group. The leaves of the Jamaican osage orange are used as an ingredient of curry powder, and as a food additive. Their flavour is described as "grassy". The wood is used for surfboards, furniture, and musical instruments.
