Resident Evil 6 Beta Steam Integration.Q: Angular 8: More than one post request to the same endpoint I have an endpoint /api/tickets/open that should be call for update. If the user clicks on the button, the call to that endpoint should be executed. If the user clicks on the same button, the update should not be executed. I'm using Observable: as you can see from the snippet, I'm subscribing to it and logging the method called. I try to trigger the method on the click event, but it's triggered even if I clicked before on the button. export class AppComponent { constructor(private http: Http) {} ngOnInit() { // send a request every 200ms this.requestUpdate.subscribe(response => { console.log('from this method it was called' + response); }); } updateTicket(ticket: Ticket){ this.http.post('', ticket) .subscribe(response => { console.log(response) }) } onClick(){ // this will call the method this.updateTicket(ticket: new Ticket()) } render() { return (
