as this was my first time using a vsat receiver i wanted to start with a clear picture of how the vsat receiver worked, so that i could pin it down. this article has four parts and each part is linked to the previous part. this adapter has been used by automotive technicians for decades. it has unique features that can be used to check a vehicle battery for a variety of faults, diagnose engine operation, monitor operation of anti-theft systems like transponders, engine management systems and steering and vehicle speed sensors. one of the most useful features of this adapter is the ability to connect multiple devices at once. i can connect it to the radio, a laptop computer, and the serial port on another device, all at the same time. a year or so ago i encountered a "code 10" error when using the adapter. i realized that the adapter had

switched to the default settings for the device on another computer. i didn't need to spend more time troubleshooting the problem. the solution was to roll back my driver to a previous version. here's how i solved the problem. i had a problem that occurred intermittently every few days. the problem was that the usb to serial adapter i was using would randomly "go out". i used another serial port to confirm that the adapter was functional and was a problem with the adapter. when i moved it to another computer, it worked. i took the initiative to investigate and i found that on the first computer i was using the "automatic serial port settings" option. this was not an option that i was familiar with and i wasn't prepared for this. i don't know why this was the option but i used to leave it off. i disabled it and now everything is fine.

yes, the usb-serial converter will work for the c232. this is a usb to serial adapter. serial converters are used in cases where you have a rs232 output on a device, but don't want to run the cable to the device. they are also used when you have a device that uses rs232, but you want to have a standard serial port, for example a printer. they are also useful in cases where you have a device with no serial port, but you want to connect it to a pc via a usb to serial adapter. i have a c232 adapter. i have had no problems using it for many years. however, that was years ago. i recently updated to windows 10 and the adapter no longer appears to work. this is what happens: i plug it in, i get the following: "device setup failed for unknown reason. error code 0x00000082. device might not be recognized as a usb device. contact the manufacturer for software or driver updates. try again later. if the problem persists, contact the manufacturer for help." thanks to everyone who chimed in. i was able to use a usb to serial adapter cable to provide the additional serial port needed for my

cnc machine. i also discovered that win 7 had an issue with my cable so i purchased a different one to ensure that this would not be a problem in the future. i purchased this adapter to connect to a cnc machine. i have a code 10 issue with this. the cable is good because it is a model that was discontinued by prolific, and they replaced it. i checked out the microsoft site for this adapter and they do not list it as compatible for win 7. i think this is the problem. i need to purchase a new usb to serial adapter or get a newer version of this adapter to work.
