In one of my earlier articles analyzing Lightroom 5, I stated that there is only a partial listing of the new features on Adobe's website. Now that Lightroom 5 has become available, the only place to get a full listing of new or changed capabilities is by heading over to Adobe's help page. Here you'll find information on how to download and install the update, as well as known issues and known capabilities that are available. It's very easy to see that the update is freely available. In fact, it's fairly automatic as well. However, if you want to check before you install it, the same page provides a link where you can see a list of the files that will be added when you install the new version. This can save you time if you're not very sure about doing the update, because you can see it's only a few files that will get added. The Lightroom team has, by the way, very kindly provided a help page in the Lightroom forum on the Adobe website where discussions and opinions on the update are currently being discussed. Interestingly, despite having been released with nothing but positive feedback, Lightroom 5 has faced a time-consuming loss of users. The problem? It's become impossible to import images from the Panasonic Lumix DMC-FS25. It's a manufacturing defect: Panasonic Lumix seems to employ a bug in the viewer for the app to FFDC (File Format Description Code). The workaround, as well as a means to resolve the meaning of the FFDC, is to get the app updated from version 2.7.28-1 to 3.0.1, a free update that will be available soon for all authorized users.
