Some of the tools in Photoshop CS6 are enabled by default. To get the most out of Photoshop CS6, users have to use the tool bar to open tools when the default tools are not sufficient. These tools includes pens, brushes, gradient tools, text, selection and color tools, adjustment tools, and layers. Color coordinated to match other Photoshop tools, the user controls in Photoshop are grouped together in tool palettes. There are also icon bars in the bottom of the screen where you can locate tools related to the current path of the image. A tool that's open on the workspace will naturally show up on the current path selected. The workspace is your place of creativity and is where you make your work appear or disappear. It is also where users can store documents and panels that are required for specific projects. Colors in the color panel allow users to set the background, foreground, ambient, and in between. An object is a spot where you can add a new image, similar to placing an object directly in a page of a book or a piece of paper. Photoshop can display objects in composite and layers. Digital images are made from collections of objects called pictures, which are identified as different layers. Once you have the picture layer in Photoshop, you can move objects around, paste in other pictures, and crop or add paint and text. Layers are used to organize pictures, objects, and text, and the visibility of those layers can be used to reflect the importance they have to an image.

This was the catalyst that prompted us to create a new paper source, one with destiny in our own hands. We knew immediately that 4th Paper would be spectacular. When we saw the first paper samples, our vision of ISOANOVA inkjet paper was finally realized! It was everything we hoped for, and more. In fact, more than we'd imagined. We took our first steps as a business and as creative individuals with the goal of providing outstanding products. Since that day, we have heard our customers' needs and used the lessons learned from Agfa's Kodak Gallery to enable us to provide the best printed product in the world. When we started out, we aimed to create an image software package similar to the ones that were popular at the time of the launch of

Photoshop. It was then when we realized that the people who were creating those kinds of products were also developing the market for our paper. As a photographer, I didn't have the luxury of thinking about the pure aesthetics of vibrant prints. I had to think about how I could get the product I was paying for—backsides polished and tack-free, with the best ink coated paper I could find. I worked tirelessly to pursue these goals, and the rest is now history. **To observe an exclusive of providing the ideal and spectacular product, I visited an office of a die-cutter company, where I saw the work done in Japan with the latest German equipment. In the following video, I introduce you to the paper factory in Czech Republic, where all of the paper plates are cut using German tools and machines. Behind me, there's a preview of a backside that will come in the future. Discover more information on at:**
