The posts in this review are all by one reviewer Sunsetla-Imperius, the very same one who revealed the surprising effects of the Lens Blur feature in the August post. There's no denying she is enthusiastic about the app. The Photoshop CC feels safe and familiar. The only new topics that stick out are multitrack, parallel editing and an updated Sound panel. Multitrack is a new Adobe Premiere feature that's included as-is in Photoshop. With it, you can add multiple audio tracks (usually up to four) to your picture files.

In addition to the transition away from 3D and into 2D, Adobe Photoshop has adopted the Industry Foundation Graphics (IFG) initiative led by Intel, embedded in the Atom platform, to empower designers with a stable framework for digital asset creation. The work of others across the Industry Foundation Graphics initiative on rangefinder and 3D systems is being leveraged into Photoshop now. Key examples include point clouds, raytracing, and 2D/3D integration. Implementation of the newest technologies in Adobe Creative Cloud will enable more novice users to jump in and quickly produce incredible images from the ground up, leveraging familiar tooling that the industry has come to know and trust. An example of how this new roadmap will play out, is the recently announced Adobe Photoshop Creative Cloud 2019 release. This release will, among other things (see this blog post from Adobe for more details) bring an upgraded GPU-based algorithm to the IPTC metadata workflow, allow content-aware fill, and adopt industry-standard image formats. It will also include the next-gen 3D tools announced here. Adobe Creative Cloud enables users to consume the industry's most popular intellectual property tools while retaining a secure connection with local data regardless of the devices they use to create. In case you are wondering how big the Photoshop tools will remain after 3D becomes a thing of the past, a good indication of the overall footprint of the tools can be seen here: Since the launch of Creative Cloud in early 2012, Adobe has hosted over

1 million Creative Cloud users.
